

**CHAPTER – IX**

**CONCLUSION**

- 9.1 Introduction
- 9.2 Salient Features
- 9.3 Problems And Solution

## **9.1 INTRODUCTION**

The system "**ATTENDANCE ANALYSIS SYSTEM**" is developed to satisfy the needs of all its users as far as possible and is expected to eliminate the problems of the existing manual system. While developing this system, efforts have been made to make the system as user friendly as possible.

The developed system is a completely menu driven system with required necessary help about the system, so that the user can handle it without facing any problem

## **9.2 SALIENT FEATURES**

This Attendance Analysis System has the facilities for getting instant statistic of attendance system. The user can now get printed data as when they required. This facilitates them from going through all manual exercises experienced in the past.

## **9.3 PROBLEMS AND SOLUTION**

In developing this Attendance Analysis System though we tried our best to make it a problem free system, we could not, but find some unavoidable problems in the system. For example a user must be familiar about what type of data he should enter in each field. Otherwise he will face different types of error in handling the system. So before handling this system a user must have handling guides from concerned authority.
