## **CHAPTER 10: CONCLUSION**

### **10.1 INTRODUCTION**

The system "STUDENTS FEEDBACK ANALYSIS SYSTEM" is developed to satisfy the needs of all its users as far as possible and is expected to eliminate the problems of the existing manual system. While developing this system, efforts have been made to make the system as user friendly as possible.

The developed system is a completely menu driven system with required necessary help about the system, so that the user can handle it without facing any problem.

### **10.2 SALIENT FEATURES**

This Students Feedback Analysis System has the facilities for getting the overall rating of individual teachers. This system facilitates the user from going through all manual exercises experienced in the past.

### **10.3 PROBLEMS AND SOLUTION**

In developing this Students Feedback Analysis System though we tried our best to make it a problem free system, we could not, but find some unavoidable problems in the system. For example, a user must be familiar about what type of data he should be enter in each field. Otherwise he will face different types of error in handling the system. So before handling this system a user must have handling guides from concerned authority.
