

(e) Briefly explain the functions of sympathetic and parasympathetic nervous systems. $3+2=5$

4. (a) What are visceral arches? Give a comparative account of the visceral arches in vertebrates. $2+8=10$
Or
(b) What is the hilum of kidney in mammals? Discuss the comparative structure of kidney in vertebrates with neat labelled diagrams. $2+8=10$

5. (a) Give a comparative account on the integument of reptiles, birds and mammals with suitable diagrams. 10
Or
(b) Write a note on the evolutionary changes in the pattern of heart in vertebrates with appropriate diagrams.

6. (a) What is corpus callosum? Describe the structural features of the brain of a reptile and compare it with that of a mammal. $2+8=10$
Or
(b) What are air sacs? Write a note on the types of air sacs. Mention its functions. $2+4+4=10$

ZOOLOGY

(Honours Core)

Paper : ZOO-HC-4016

(Comparative Anatomy of Vertebrates)

Full Marks : 60

Time : Three hours

The figures in the margin indicate full marks for the questions.

1. Choose the correct answer : $1 \times 7 = 7$

(a) Hairs and nails are composed mainly of
(i) collagen
(ii) keratin
(iii) adipose tissue
(iv) cartilage

(b) Foramen of Panizza is seen in
(i) crocodile
(ii) frog

Contd.

- (iii) fish
- (iv) cow
- (c) Wolffian body is also known as
 - (i) pronephros
 - (ii) mesonephros
 - (iii) archinephros
 - (iv) metanephros
- (d) The fifth cranial nerve is
 - (i) oculomotor nerve
 - (ii) trochlear nerve
 - (iii) abducens nerve
 - (iv) trigeminal nerve
- (e) Organ of Corti is present within
 - (i) scala media
 - (ii) scala vestibuli
 - (iii) scala tympani
 - (iv) None of the above
- (f) Pain receptors are also called as
 - (i) mechanoreceptor
 - (ii) Merkel's disc
 - (iii) vomeronasal organ
 - (iv) nociceptors

(g) Teeth with well-developed roots set in bony sockets in the jaw are called

- (i) acrodont
- (ii) thecodont
- (iii) pleurodont
- (iv) bunodont

2. Write short notes on the following : $2 \times 4 = 8$

- (a) Uropygial gland of birds
- (b) Adrenergic and cholinergic receptors
- (c) Stomach of ruminants
- (d) Role of integument in thermoregulation

3. Answer the following questions : **(any three)** $5 \times 3 = 15$

- (a) Briefly explain the major components of axial skeleton in mammals.
- (b) Write a note on the accessory organs of the digestive system.
- (c) What do you mean by external and internal respiration? Elaborate the structural features of internal or true gills found in adult fishes. $1+4=5$
- (d) Write a note on the structural and functional aspects of rods and cones found in the retina of human eye. $3+2=5$
